

# WHITE LADY

## F1 Hybrid Turnip

### OUTSTANDING QUALITIES

- ◆ VIGOROUS AND UNIFORM HYBRID
- ◆ SLOW TO BOLT
- ◆ GOOD RESISTANCE TO PITHINESS AND CRACKING

**White Lady** is a vigorous and uniform hybrid. In temperate regions **White Lady** can be sown in early spring and autumn. **White Lady** matures around 35 - 40 days in the warm season and 44 – 55 days in the cool season from sowing. White lady has a pure white colour and very good taste. Bolting resistance is slow, with a very good yield potential. It has good resistance to pithiness and cracking.

### SPECIAL VARIETAL REQUIREMENTS

- White lady can be sown in early spring and autumn in temperate regions
- White Lady has a good cold tolerance but don't put nitrogen during the cycle otherwise this will be too vigorous and might be damage by the frost. It is better to put the nitrogen at the beginning of the sowing period
- Contact your area representative for more information

CHARACTERISTIC*	WHITE LADY
TYPE	Pure white turnip ( <i>Brassica rapa</i> )
MATURITY	Warm season: 35 – 40 days from sowing Cool season: 45 – 55 days from sowing
SEASON	Spring and autumn in temperate regions
ROOT SHAPE	Semi-globe
DIMENSIONS	5 – 7 cm
SKIN COLOUR	Pure white
SMOOTHNESS	Smooth
FLESH COLOUR	Pure white
FLESH TEXTURE	Crispy
FLAVOUR	Sweet
TOP	Vigorous
TOP HEIGHT	35 – 45 cm
TOP COLOUR	Dark green
DISEASE REACTION (SCIENTIFIC)	-
BOLTING REACTION	Slow
YIELD POTENTIAL	Very good
SUGGESTED POPULATION	200 000 – 400 000 plant per Ha (0.5 – 1kg seed/Ha)
MARKET USE	Bunching and pre-packing
SPECIAL FEATURES	Vigorous, uniform hybrid with a pure white colour and slow to bolt. Good resistance to pithiness and cracking

\* Characteristics given are affected by production methods such as soil type, nutrition, planting population, planting date and climatic conditions. Please read disclaimer.

**Disclaimer:** This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Sakata Seed Southern Africa (Pty) Ltd Conditions of Sale before ordering seed.

**Resistance:** is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
