

MALELANE

Garden Bean

OUTSTANDING QUALITIES

- FIELD RESISTANCE TO RUST
- ADAPTED TO LOCAL CONDITIONS
- CONCENTRATED POD SET
- POSSIBLE MECHANICAL HARVESTING

Malelane is an attractive garden bean that has been developed in South Africa. It is a hardy bean with good disease resistance and a concentrated pod set making it ideal for those producers looking to harvest a minimal number of times. Pods are carried high up on a strong plant. This combined with a concentrated set give it the potential to be mechanically harvested.

Characteristics	MALELANE
Type	Garden bush bean/Bobby bean
Maturity	60-65 Days
Growth Habit	Erect bush
Pod colour	Medium Green
Pod Length	10-12cm
Pod Diameter	9-11mm
Pod cross section	Round
Pod appearance	Round, smooth and straight
Plant population	165-250 000 per ha
Use	Fresh market, freezing and home garden
Fungal diseases	Rust
Viral resistance	Bean common mosaic virus
