

OUTSTANDING QUALITIES

- ◆ BRIGHT RED, UNIFORM ROOTS
- ◆ RESISTS PITHING
- ◆ PERFORMS WELL UNDER WARM CONDITIONS
- ◆ GOOD YIELD POTENTIAL
- ◆ SHORTER TOPS

Cherriette is a bright red F1 hybrid radish that performs very well during the warmer season. Maturity is medium, around 25 - 30 days from sowing. Roots are globe-shaped, very uniform and have silky smooth shoulders and a refined tap root. Yield potential is excellent with high quality and uniform roots. Field holding is good and **Cherriette** tolerates pithing very well. **Cherriette** has good cracking resistance. Foliage is medium to short, healthy and dark green. **Cherriette** has a sweet taste and the texture is crisp and juicy. **Cherriette** is used for quality bunching, salad packs and the pre-pack markets.

SPECIAL VARIETAL REQUIREMENTS

- Suitable for all year round production in warm areas and during spring and autumn in cooler areas
- Contact area representative for more information

CHARACTERISTIC*	CHERRIETTE
TYPE	Red radish (<i>Raphanus sativus L. var. sativus L.</i>)
MATURITY	Medium (around 25 - 30 days from sowing)
SEASON	Summer for all areas, spring and autumn for cooler areas
ROOT SHAPE	Globe
DIMENSIONS	2.5 x 2.5 cm
SKIN COLOUR	Bright red
SMOOTHNESS	Very smooth
FLESH COLOUR	White
FLESH TEXTURE	Very firm, crisp
FLAVOUR	Sweet
PITH RESISTANCE	Very good
CRACKING RESISTANCE	Very good
TOP	Medium to short with strong foliage
TOP HEIGHT	8 - 10 cm
TOP COLOUR	Dark green
DISEASE REACTION (SCIENTIFIC)	-
FIELD HOLDING	Very good
YIELD POTENTIAL	Excellent
SUGGESTED POPULATION	10 - 12 kg per ha, 1.2 - 1.8 million seeds per ha
MARKET USE	Bunching, salad packs and pre-pack
SPECIAL FEATURES	High quality uniform sweet roots, very slow to pith and excellent yield potential

* Characteristics given are affected by production methods such as soil type, nutrition, planting population, planting date and climatic conditions. Please read disclaimer.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Sakata Seed Southern Africa (Pty) Ltd Conditions of Sale before ordering seed. **Resistance:** is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).

* Experimental: This variety does not appear on the current South African Variety list, but has been submitted for registration.
