

OUTSTANDING QUALITIES

- ◆ **YELLOW VEIN COLOUR**
- ◆ **THIN YELLOW STEMS**
- ◆ **MEDIUM SIZED LEAVES**
- ◆ **WIDE ADAPTABILITY**

Eldorado is a yellow stem green-leaved swiss chard. Very adaptable and performs well in different climatic zones in South Africa. Leaves are medium in size and stems are thin. The yellow stems are very bright in colour and the contrast between green (leaf) and bright yellow (stem) makes for a very appealing end-product.

SPECIAL VARIETAL REQUIREMENTS

- Could bolt if growing out of winter into summer
- Contact your area representative for more information

CHARACTERISTIC*	ELDORADO
KIND	Open-pollinated Swiss Chard (<i>Spinacea oleracea</i>)
MATURITY	Between 55 - 65 days
COLOUR	Dark glossy green leaves with yellow stems
LEAF SURFACE	Deeply savoyed
LEAF MARGINS	Rippled
PLANT HEIGHT	56 - 69 cm
STEM COLOUR	Yellow
YIELD POTENTIAL	Good
USE	Home garden, fresh market, pillow packs
SPECIAL FEATURES	Excellent speciality swiss chard, used for both large leaves and baby leaf production

* Characteristics given are affected by production methods such as soil type, nutrition, planting population, planting date and climatic conditions. Please read disclaimer.

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Sakata Seed Southern Africa (Pty) Ltd Conditions of Sale before ordering seed. **Resistance:** is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).

* Experimental: This variety does not appear on the current South African Variety list, but has been submitted for registration.
